Anuj Patel

Atlanta, GA | 404-433-4176 | apatel3162@gatech.edu | Green Card Holder

Education

Georgia Institute of Technology, School of Electrical and Computer Engineering Atlanta, GA

Bachelor of Science in Computer Engineering (BS) *May 2028*

- Dean's List, HOPE Scholar
- Threads: Computing Hardware & Emerging Architectures, Systems and Architecture
- Relevant Coursework: Data Structures & Algorithms, Objects & Design, Discrete Math, Linear Algebra

Experience

Revved Up Kids Atlanta, GA

Software Engineering Intern *June 2026 – August 2026*

- Cut event task setup time by 70% with a Power Automate and SharePoint system that turns intake emails into per-event lists of 53 templated tasks with rules-based assignment, due dates, and daily reminders to staff
- Rebuilt donor acknowledgement letters in Salesforce with Apex and Visualforce, consolidating five partially-broken legacy systems into one tool generating editable PDFs and emailing them as attachments; deployed to production
- Caught 11 logic bugs in a Copilot Studio chatbot by building a Python static analyzer for its YAML topics and an interpreter tracing all about 11,600 conversation paths; redesigned the bot into a router architecture

Internet Outage Detection & Analysis @ Georgia Tech Atlanta, GA

Outage Detection Automation Team *January 2026 – May 2026*

- Engineered an automated detection system in Python to process high-frequency BGP, active probing and telescope data, resulting in a 35% improvement in incident response times for regional internet outages
- Automated cross-platform reporting by integrating the detection engine with Google Sheets APIs, providing real-time visibility into 100+ outage events for researchers and journalists, reducing reporting latency by 60%
- Developed a monitoring dashboard using Streamlit to visualize global connectivity trends, implementing custom search and filtering logic to maintain sub-500ms latency for large-scale outage datasets used by the research team

Bazar Thousand Oaks, CA

Engineering Intern *May 2024 – August 2024*

- Optimized front-end aesthetics by implementing Tailwind CSS across 20+ modular UI components, effectively reducing CSS bundle size by 45% and decreasing initial page load times by 200ms for better user retention
- Contributed to a React & TypeScript codebase within a high-velocity startup environment, collaborating with senior engineers to refactor legacy components and resolving 15+ front-end tickets to improve app stability
- Facilitated Agile development cycles by actively participating in daily standups and cross-functional feature planning sessions, resulting in a 60% increase in sprint velocity and more accurate project timeline estimations

Projects

Real-Time Collaborative Code Editor April 2026

- Built a browser-based editor in TypeScript, React, and WebSockets with live multi-cursor sync, deployed on Render
- Validated operational transformation with property tests and a randomized simulation over 300 seeds
- Integrated Monaco Editor with 14-language syntax highlighting, a shareable room system, and auto-reconnect

CI/CD Pipeline Simulator (Continuous Integration & Delivery) December 2025

- Built a 4-stage GitHub Actions pipeline that lints, tests, builds SHA-tagged Docker images, and deploys on every push
- Wrote a Python health check gating deploys on the live service running the new commit, cutting release steps by 80%
- Developed a React dashboard over the GitHub API showing build history, pass rates, p50/p95 durations, and logs

AI-Powered Code Review Assistant August 2025

- Built a code review tool using Python, React, and Claude API to analyze code for bugs and style violations
- Architected a FastAPI backend with GitHub OAuth to persist review history and support live PR imports
- Engineered LLM prompt pipelines to return structured JSON, cutting parse failures by 90% for dynamic rendering

Skills

Languages: Java, Python, TypeScript, JavaScript, Apex, SQL/SQLite, Bash, C, C++, MATLAB, VHDL, HTML/CSS
Frameworks & Libraries: React, Node.js, FastAPI, Tailwind CSS, REST APIs, Django, JavaFX, Streamlit, Bootstrap
Platforms & Cloud: Salesforce (Apex, Visualforce, SOQL), Copilot Studio, Power Automate, SharePoint, AWS, Jira
DevOps & Tools: Linux, Docker, GitHub Actions, CI/CD, Git/GitHub, Render, pytest, Vitest, VS Code, IntelliJ IDEA
Practices: Agile/Scrum, Unit Testing, Debugging, Object-Oriented Design, Data Structures & Algorithms | English, Hindi
Certifications: AWS Certified Cloud Practitioner, IT Specialist (Certiport): Java, Python, Software Development
